

Model context protocol

MCP

Kaj je MCP

- MCP je odprt protokol, ki omogoča preprosto integracijo med **AI apps in agenti** in **orodja, podatki**

API

Določa kako delajo spletne storitve oz.

Backend:

- Strežniki
- Podatkovne baze
- Storitve

LSP

Kako IDE komunicira z language specific tools:

- Code navigation
- Code analytics
- Code intelligence

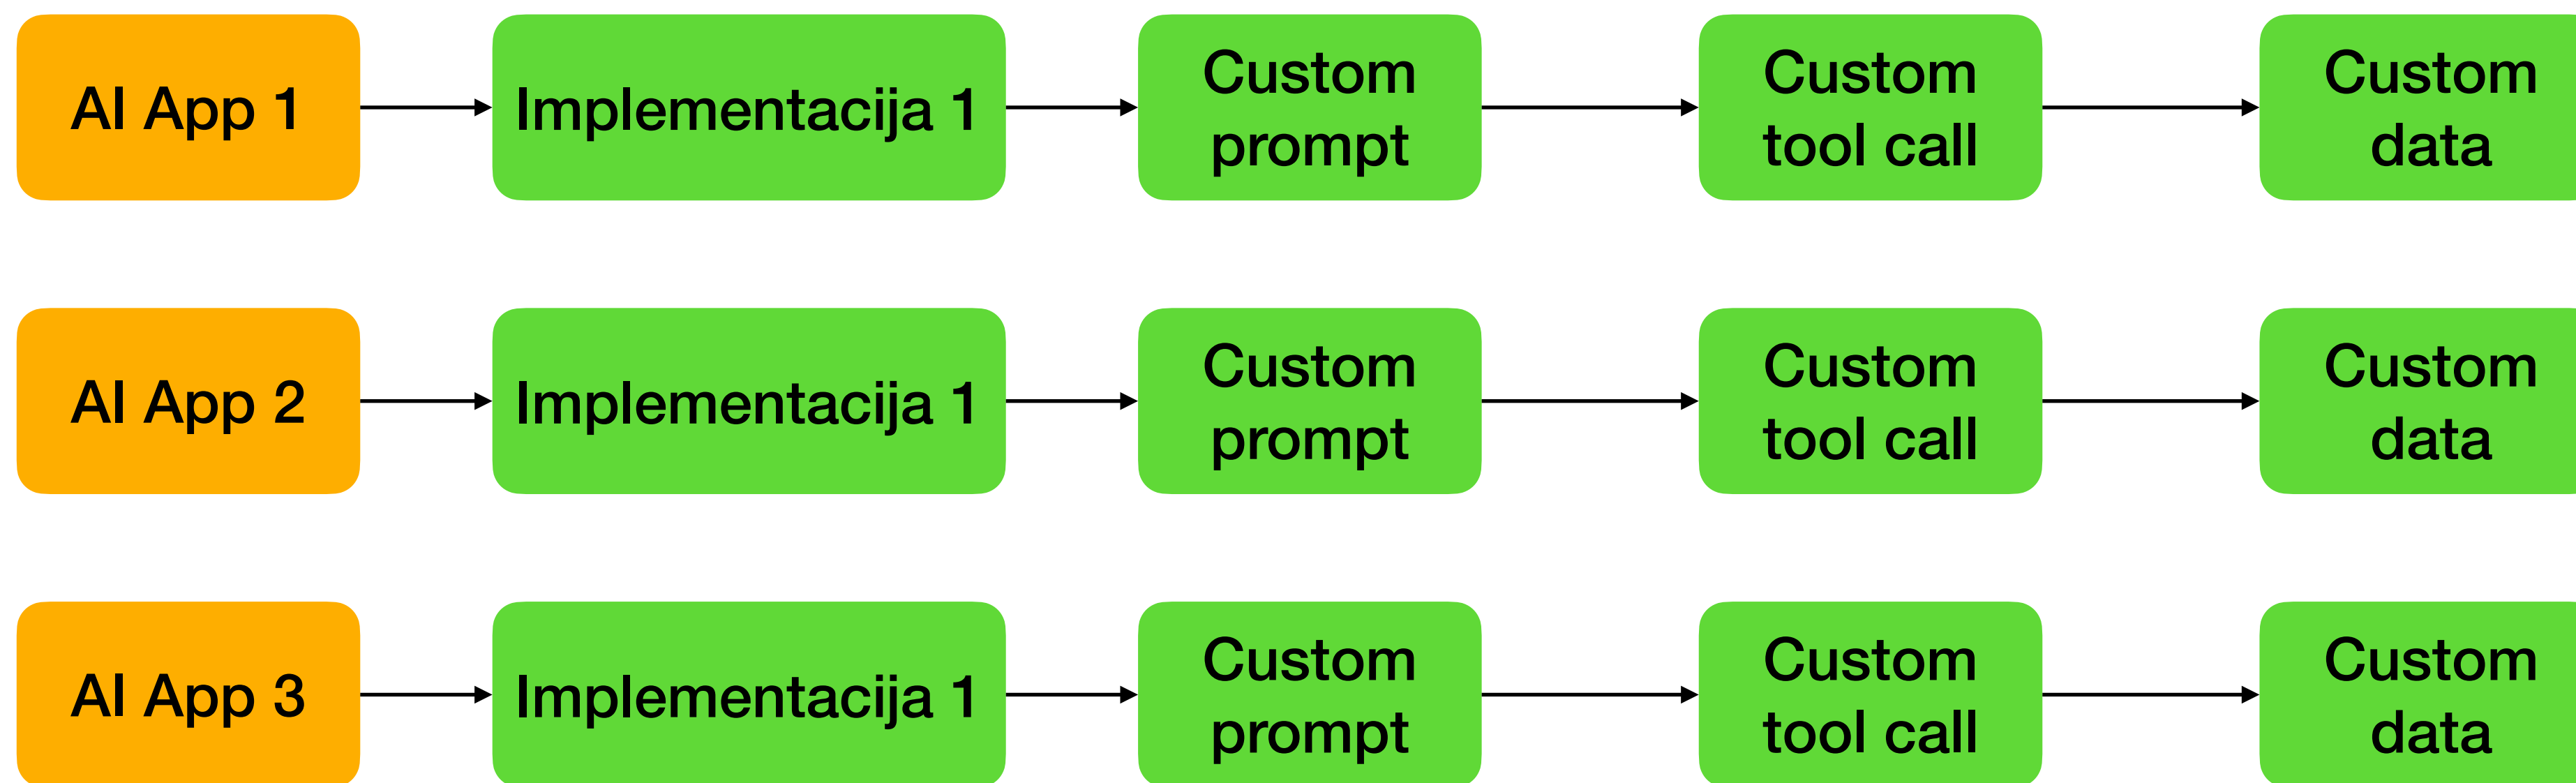

MCP

Določa kako AI aplikacije komunicirajo z zunanjimi sistemi:

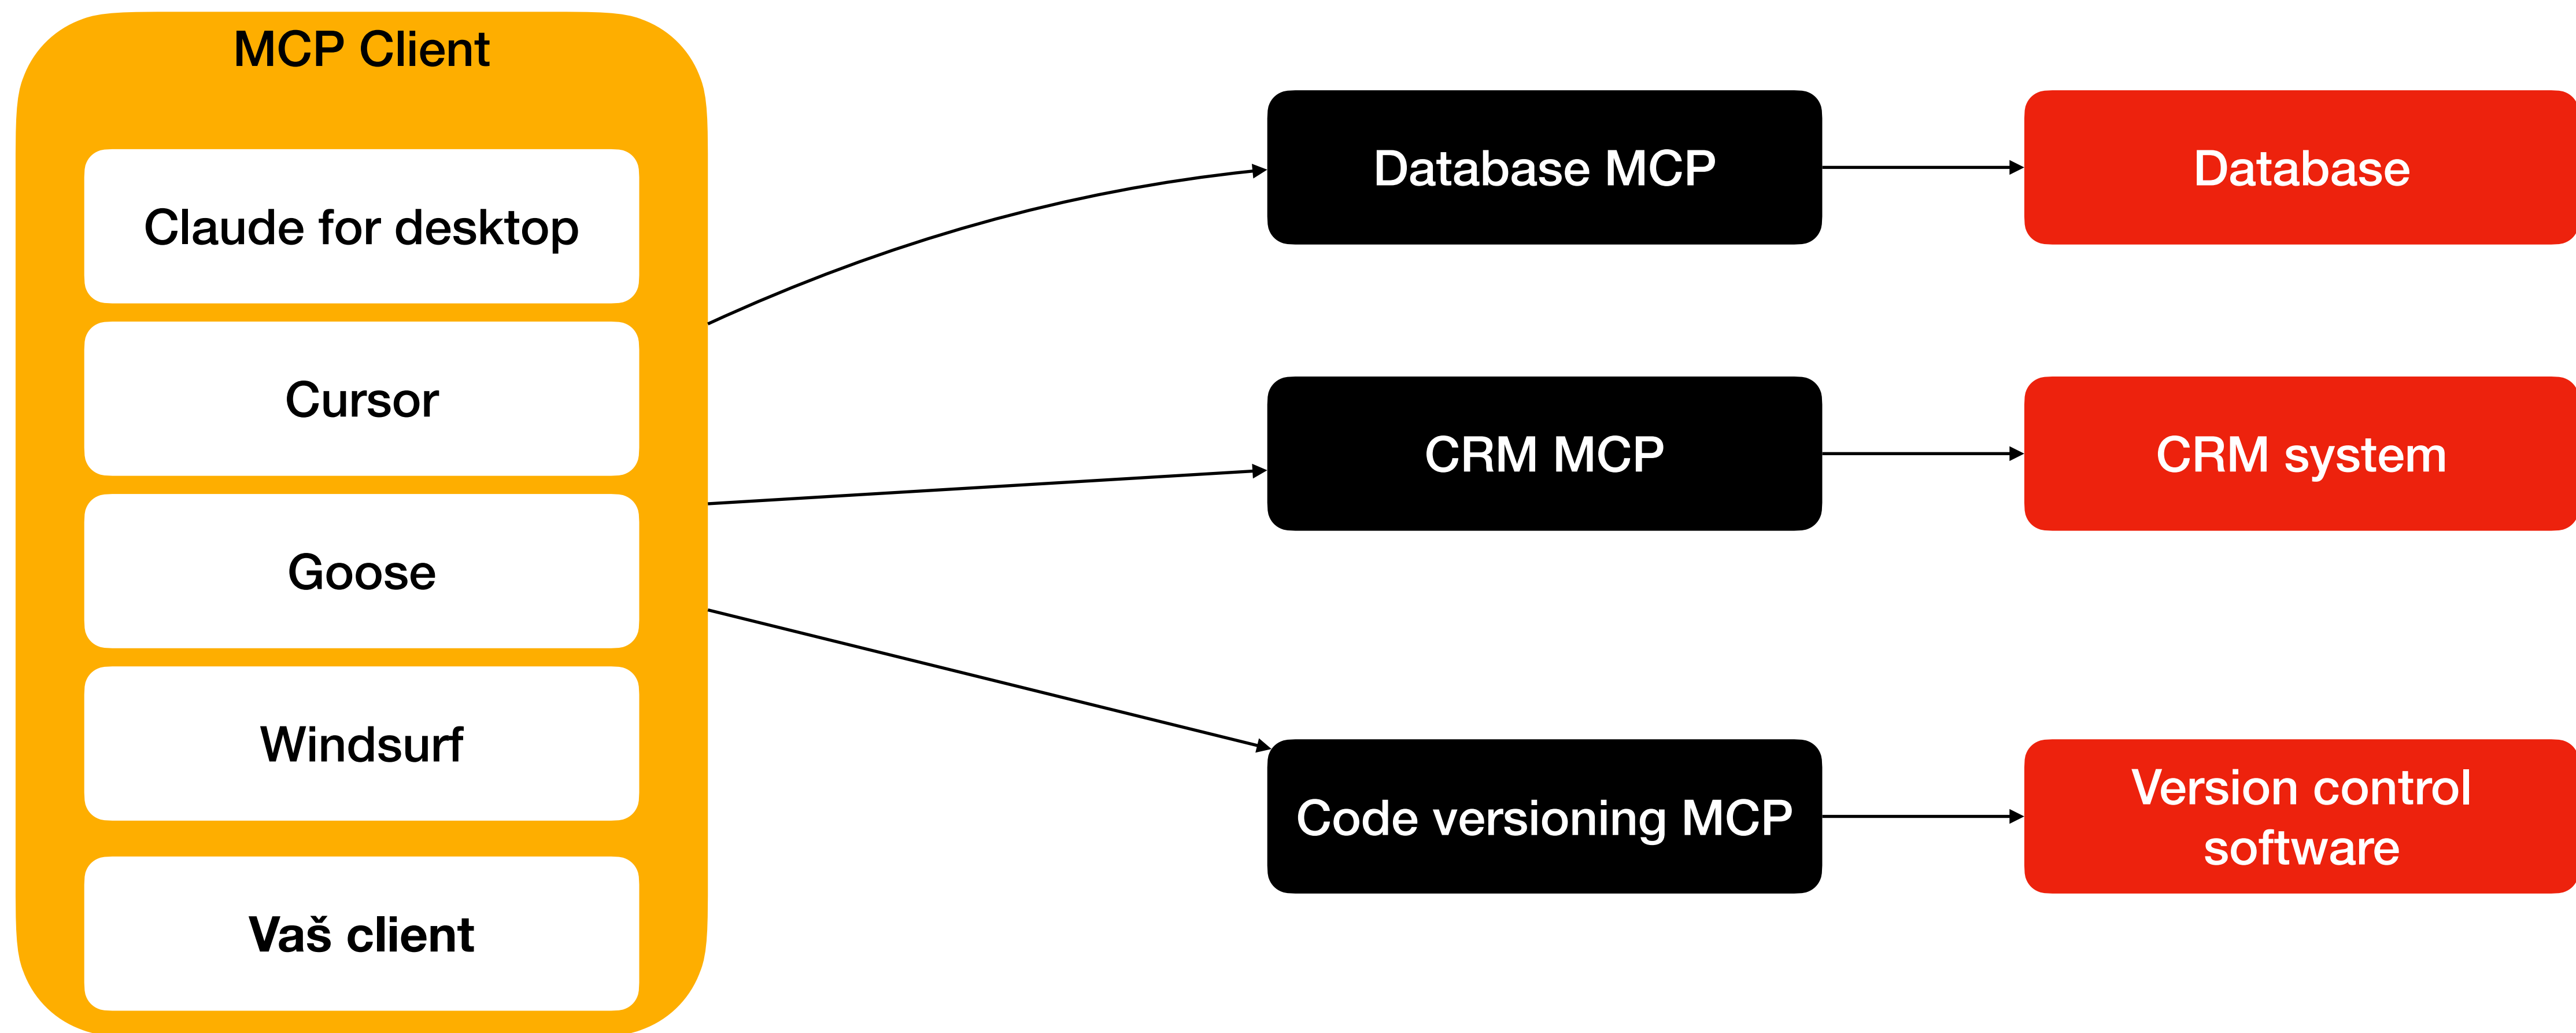

- Prompts
- Orodja
- Podatki

Brez MCP

Fragmentirana implementacija

Razvoj z uporabo MCP

Osnovna struktura

MCP client

- Kliče orodja
- Queries
- Interpolates prompts

MCP strežnik

- Expose tools
- Expose Resources
- Expose Prompts

MCP registry API

- Metadata imenik, ki omogoča
 - Discovery
 - Centralisation
 - Verification

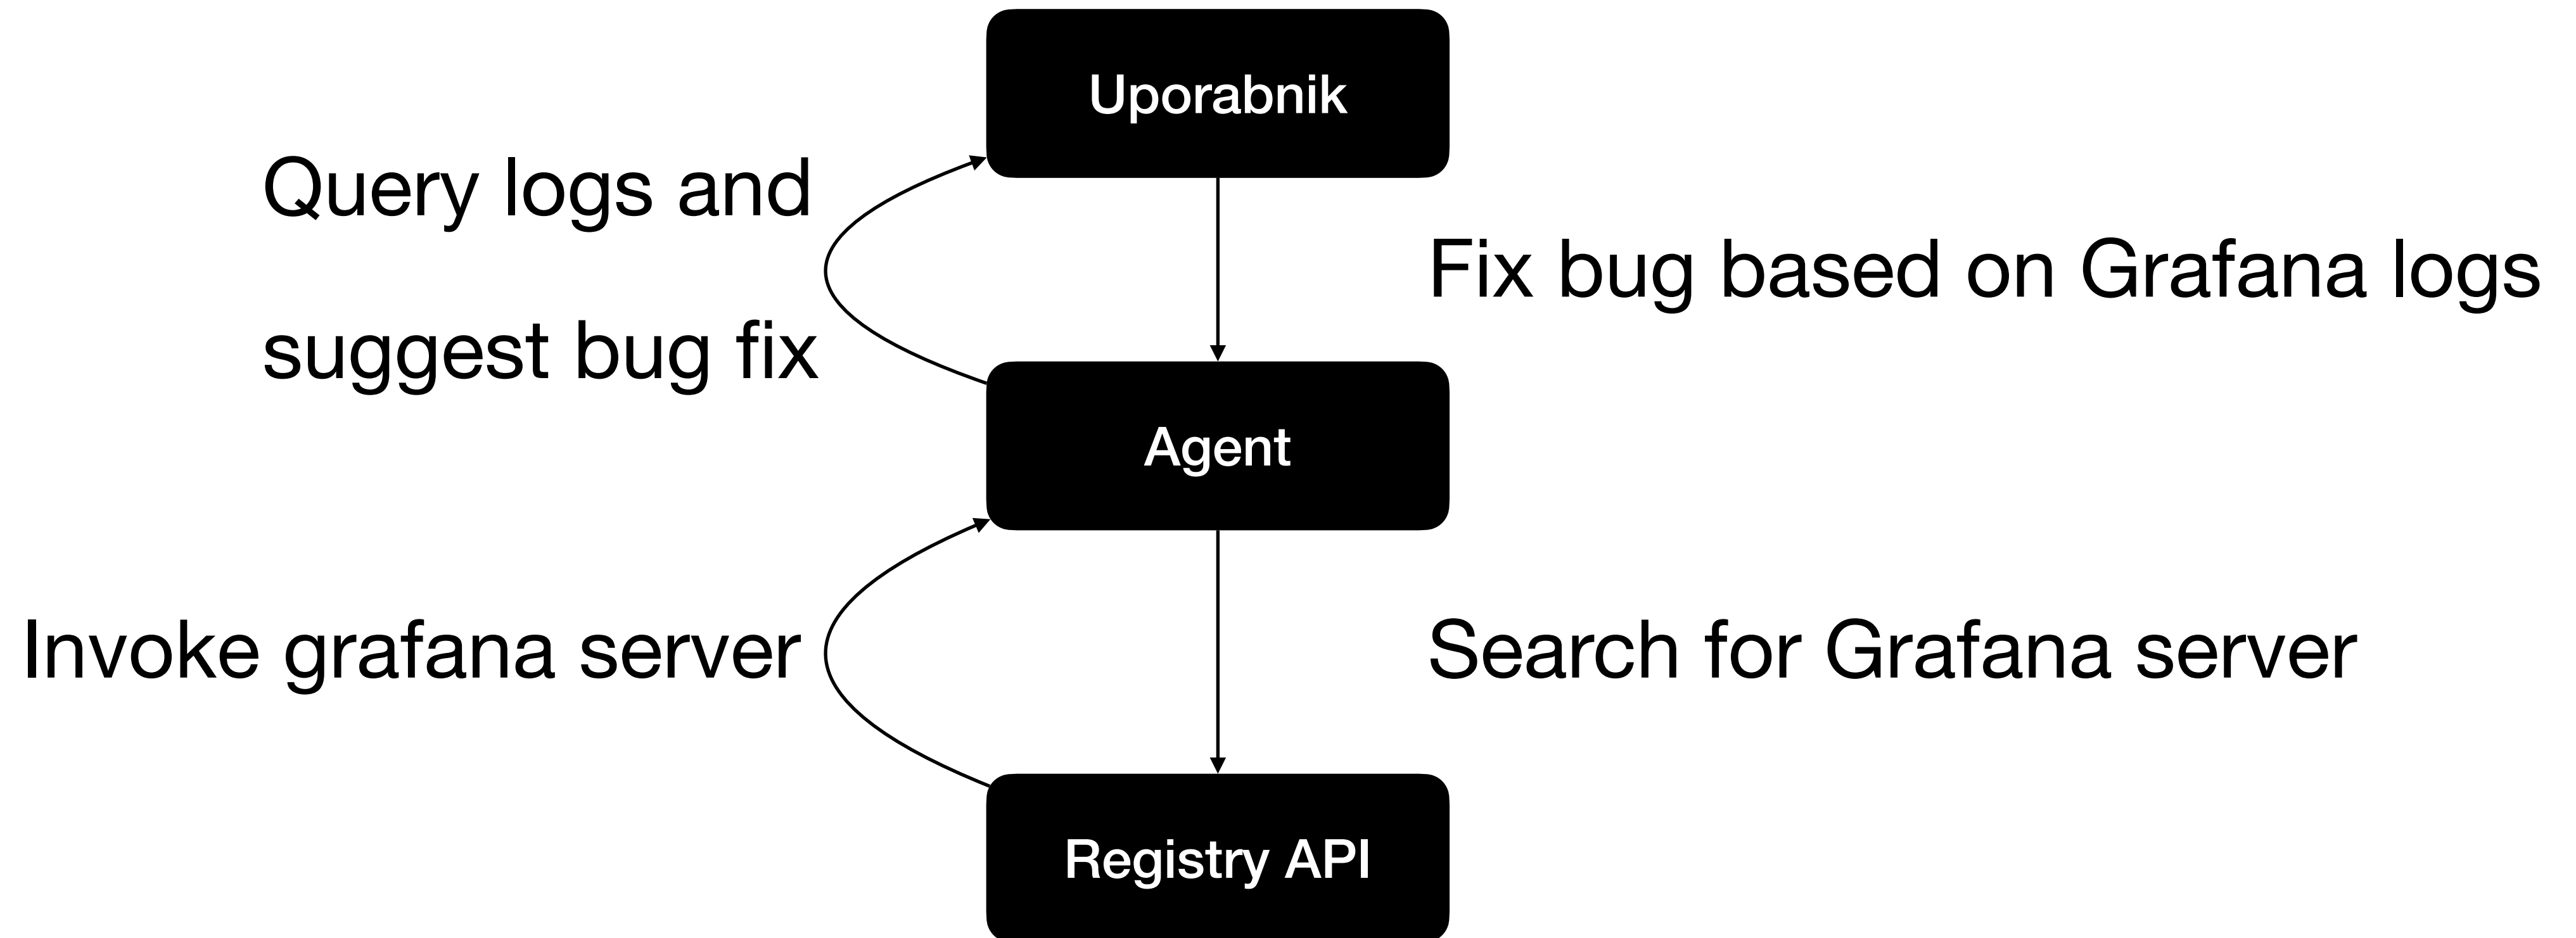

Registry API

```
Registry: npm  
published: ...  
version: 1.02  
type: stdio
```

```
Registry: pypy  
published: ...  
version: 1.02  
type: stdio
```

```
Registry: npm  
published: ...  
version: 1.02  
type: stdio
```
